PRESS RELEASE

June 10, 2014

FOR IMMEDIATE RELEASE

GPLN member World Logistics Consulting handles transformers by rail

World Logistics Consulting, Inc., a GPLN member from Chicago, USA, transported transformer main bodies by rail from the Savannah port, GA to First Energy Johnstown Substation in Johnstown, PA. The transformers weighed just over 123 tons each and measured 33 feet long, 10.5 feet wide and 12 feet high. They were loaded onto KRL 388000 freight rail cars. GPLN member World Logistics Consulting tracked the rail cars from Savannah, GA to Johnstown, PA the entire way, a distance of about 700 miles. When the transformers arrived at the First Energy Johnstown Substation, they were jacked & slid onto the pad by a local rigger. Operations ran smoothly from the start until the transformers were safely and successfully set to the pad within the substation.

To see some of WLC's moves please go to their album on the GPLN Facebook page:
